# Moonlets form at the Roche limit

# Moonlets form at the Roche limit

PR drag

Viscous  
spreading

# PR drag

$$t_{\text{PR}}^{\text{thick}} \propto \Sigma r^3$$

# Viscous spreading

$$t_{\nu}^{\text{sg}} \propto \frac{1}{\Sigma^2 r^{15/2}}$$

# Disc evolution due to Poynting-Robertson drag

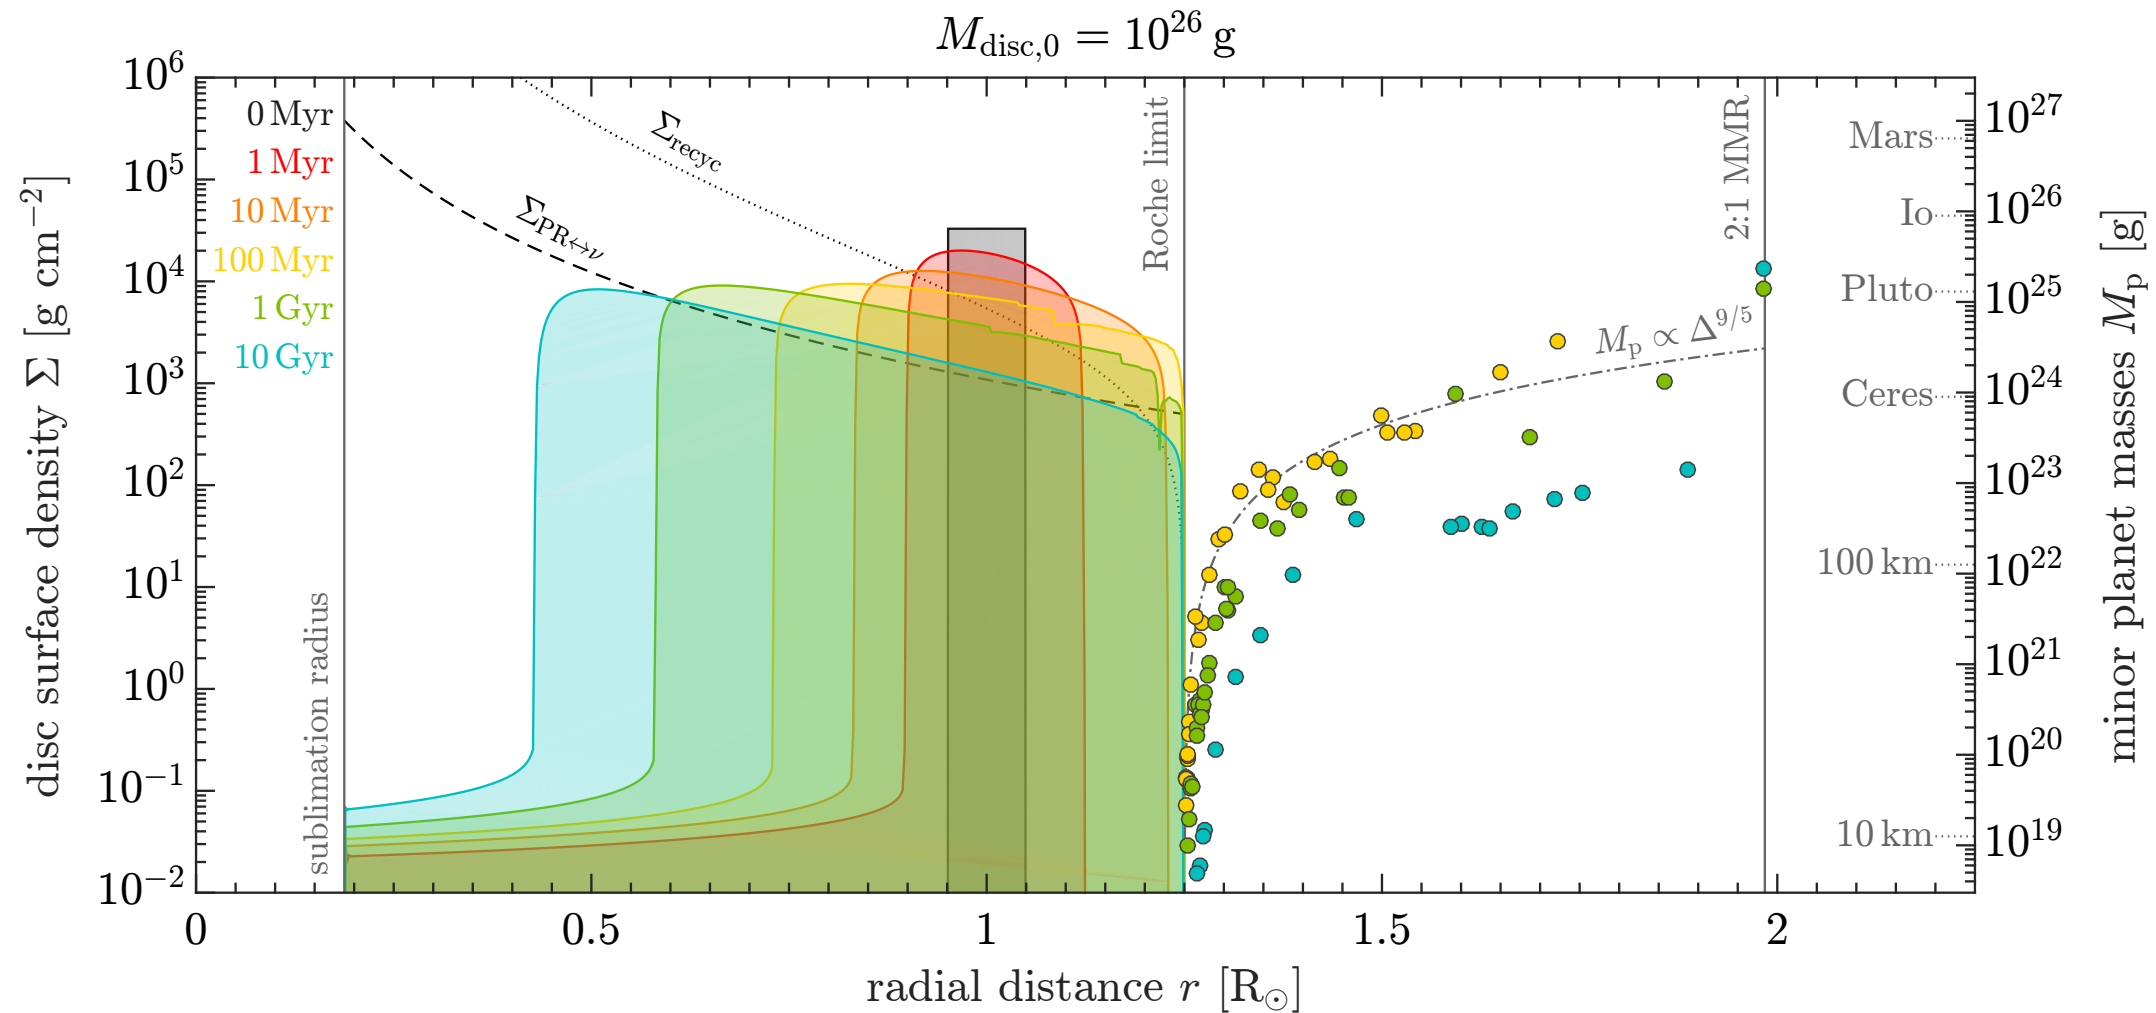

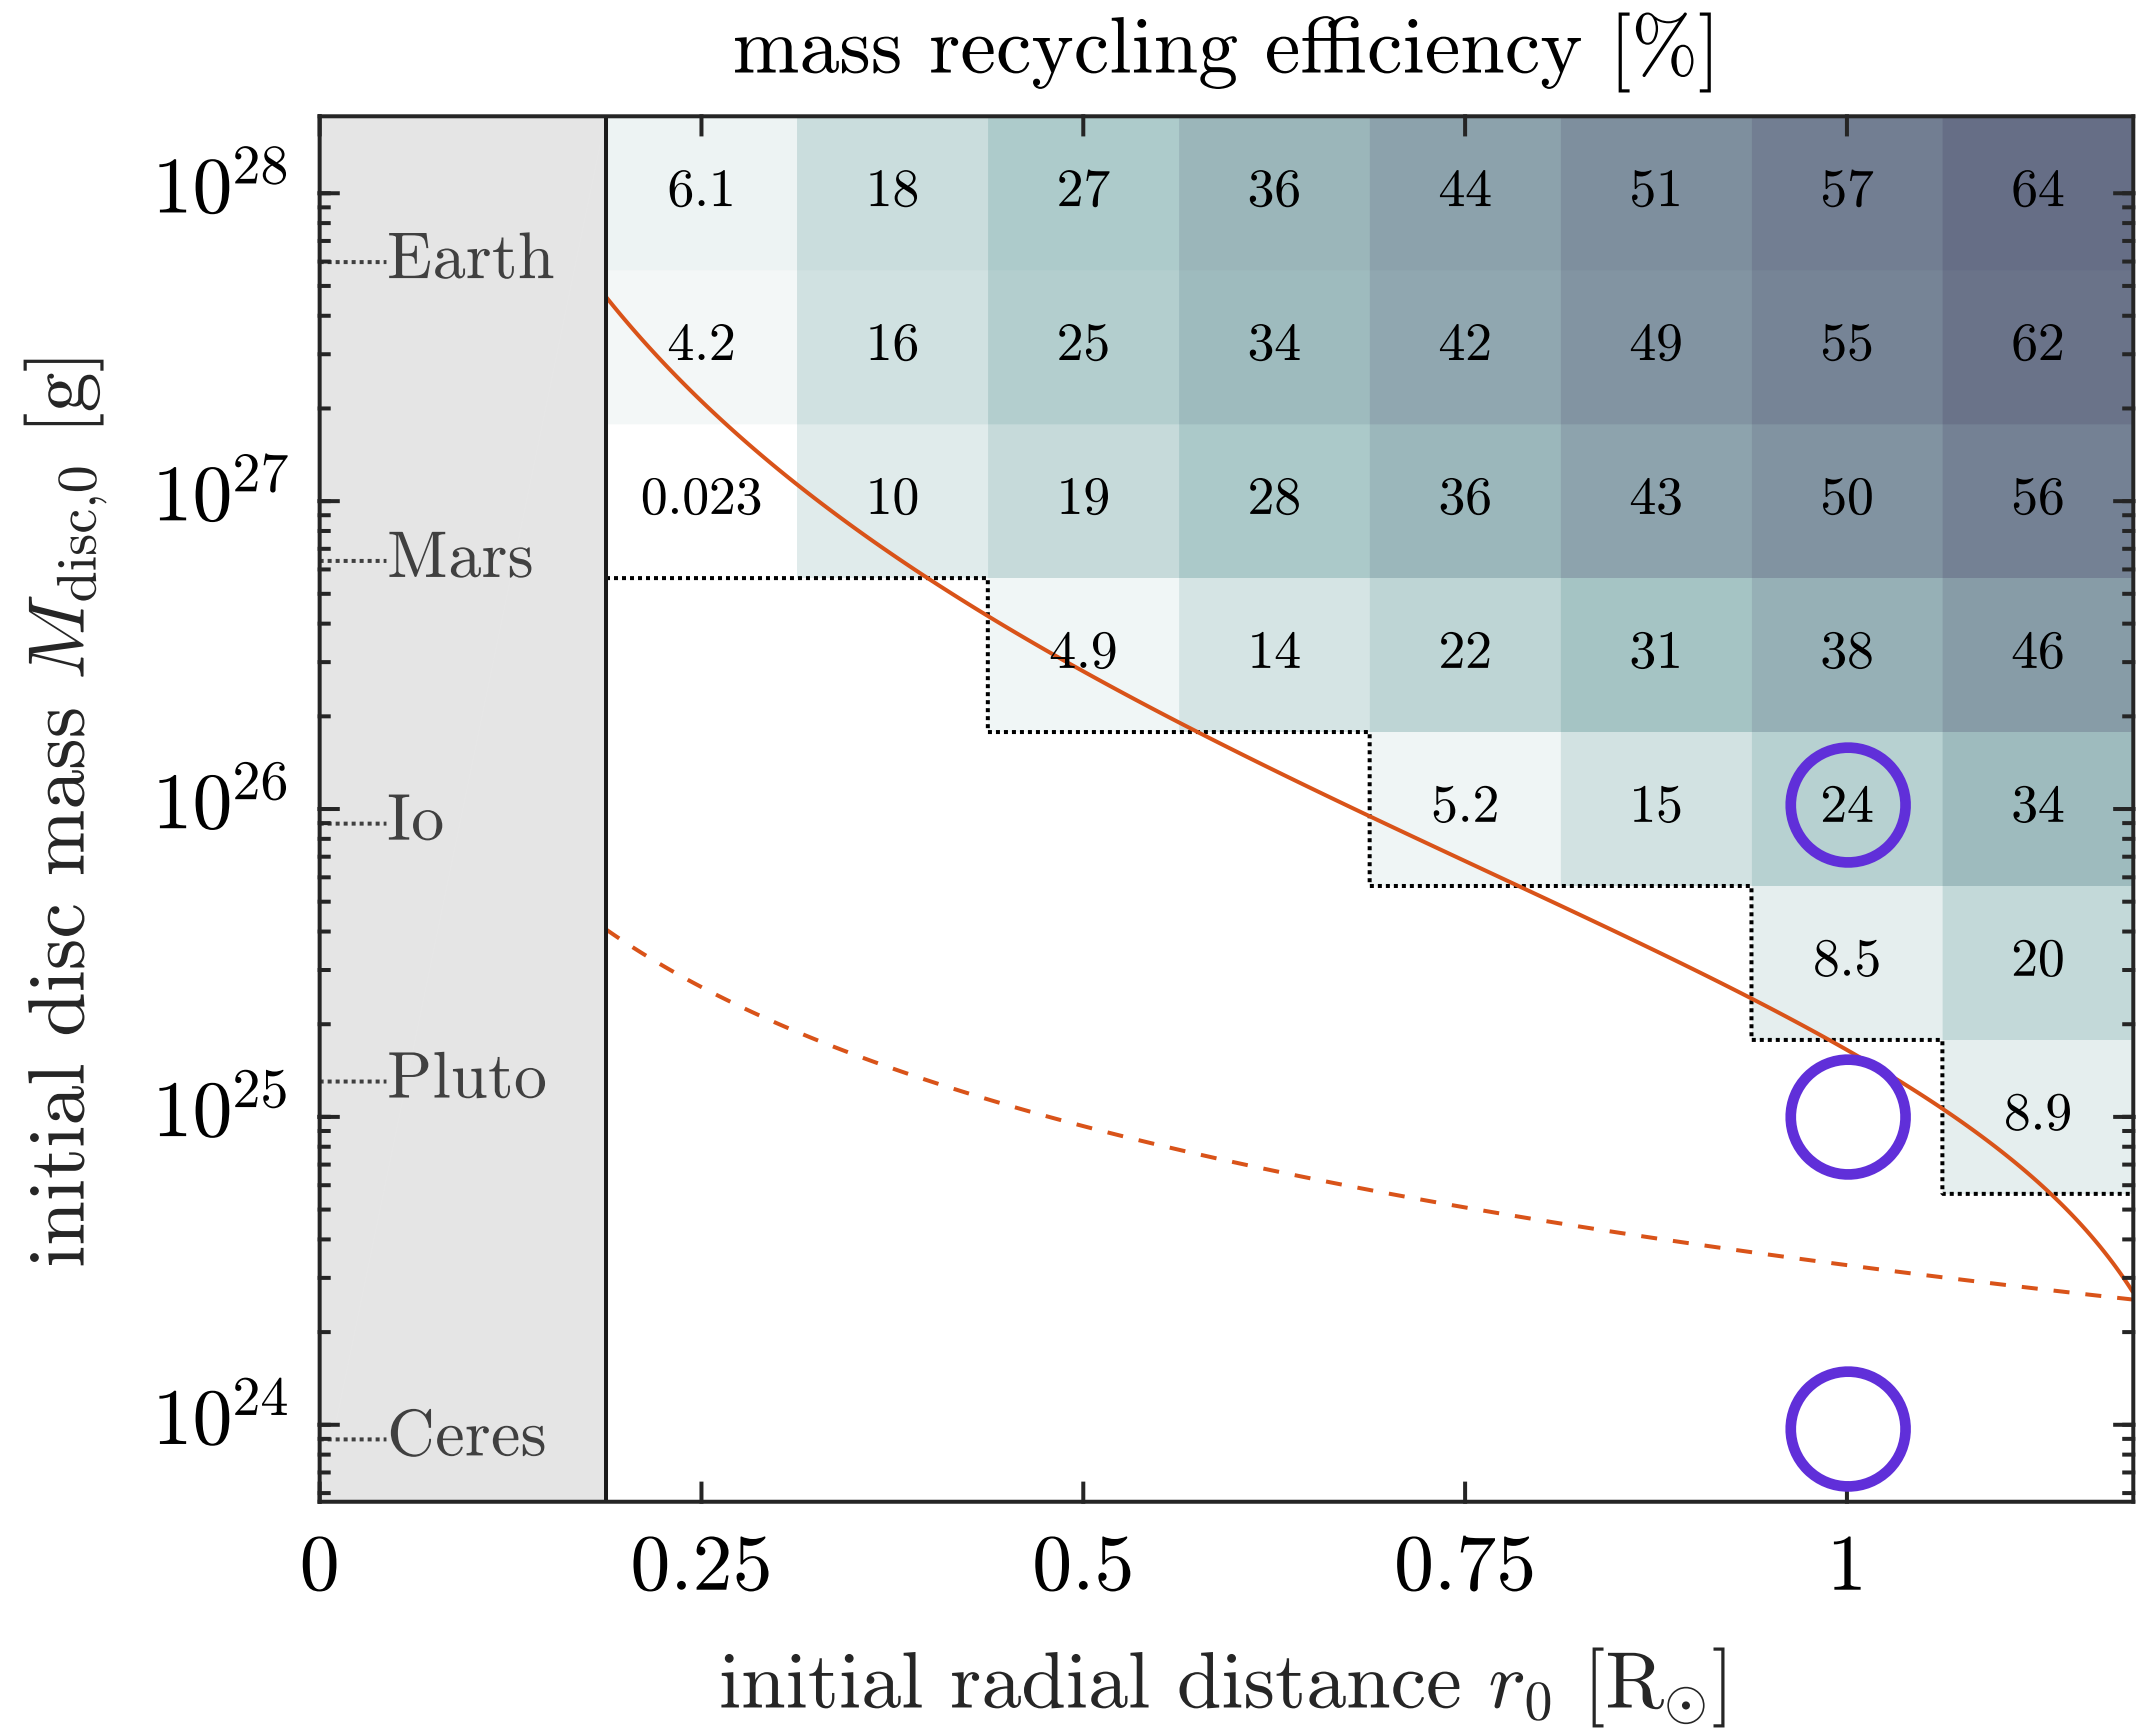

# Take-home message

Massive ( $\gtrsim 10^{26}$  g) debris discs around WDs spread viscously.

Such discs produce new planets just beyond the Roche limit.
